(54) Title: SECURE NETWORK PRIVACY SYSTEM

(57) Abstract: The invention provides a method and system of receiving communications from a network device in a network to a source of network data and establishing a secure and/or authenticated network connection between the network device and the source that appears to the network device as a direct connection to the source of network data. Broadly conceptualized, the method and system may also include a parsing module that modifies the network data passing back and forth between the network device and the source of network data.
